

## Accuratus Lab Services - Executive Summary

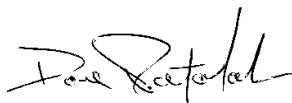

June 16, 2015

Accuratus Lab Services, previously conducting business under the names Viomed, AppTec Labs and ATS Labs, is an internationally-recognized testing laboratory. For 25+ years Accuratus has provided the highest quality antimicrobial testing services to the disinfectant/germicide, pharmaceutical, biotech and medical device industries. We deliver the broadest range of microbiological and virucidal efficacy testing, as well as analytical chemistry services to support clients from new product development through label claim documentation and end-use efficacy qualifications. Accuratus Lab Services maintains a rigorous GLP program per FDA 21 CFR Part 58.185 and EPA 40 CFR Part 160.185. In any given year, approximately 60+% of the GLP efficacy studies that are reviewed and approved by the United States Environmental Protection Agency (U.S. EPA) to support antimicrobial product registrations come from Accuratus Lab Services.

Our staff is comprised of degreed scientific professionals with decades of hands-on technical and regulatory experience including microbiologists, virologists, chemists and quality assurance auditors. We are happy to provide resumes or curriculum vitae for staff upon request. We leverage this technical and regulatory expertise to provide innovative testing for client-tailored applications to meet ever-changing regulatory requirements.

We have been audited by official inspectors with the U.S. EPA numerous times over the past 20+ years for compliance with U.S. EPA Code of Federal Regulations 40 CFR Part 160 Federal Insecticide, Fungicide and Rodenticide Act (FIFRA): Good Laboratory Practice Standards. Accuratus Labs maintains a flawless record of compliance with these federal regulations. We have never had a single adverse finding in any U.S. EPA inspection and audit, including our most recent U.S. EPA inspection and audit performed in September 2013.

We have established and validated our standard procedures to comply with our customers working in this regulated industry. However, we have been successful because we listen to our clients and approach our partnerships with flexibility. We understand that our customers may want certain systems in place that are modifications of our typical practices. This is not an unusual request. Please know that Accuratus Lab Services is very willing to implement systems quickly to comply with requests and other regulatory requirements.
